## Leftovers to light London Savoy

**London's Savoy Hotel plans to light up some of its rooms by recycling leftover food from its restaurants and turning it into electricity.**

The hotel, which is closed as it undergoes a £100m refurbishment, said the power from biomass would be enough to light 10% of its 263 guest bedrooms.

Currently food waste and leftovers from its Simpson's-in-the-Strand restaurant are recycled by the PDM Group.

The 1889-built hotel is due to reopen later this year.

At present leftovers are collected once a week for recycling which is expected to become a daily routine when the hotel reopens.

The food products are processed to recover liquid fat which is used in the manufacture of bio-fuels.

The Savoy says biomass electricity will light 10% of its rooms
